ASSIGNMENT -1

CREATE VISUALIZATIONS

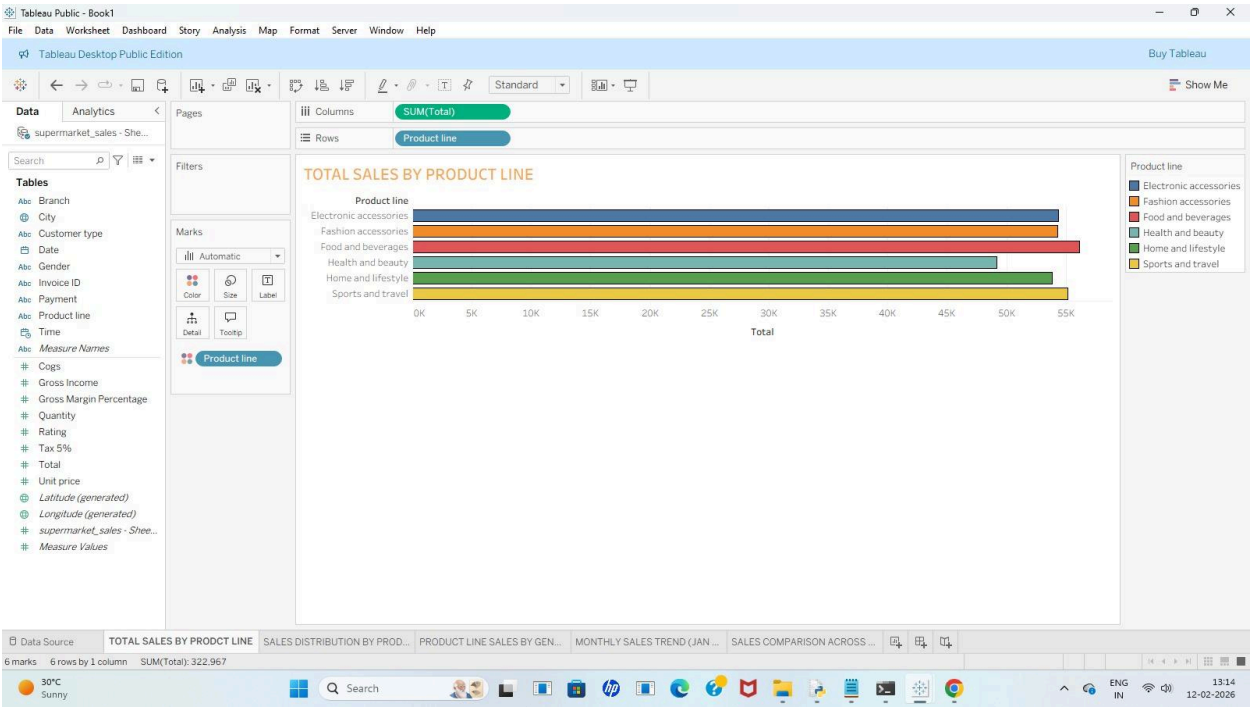
➔ **Create Bar Chart**

❖ **Purpose of a Bar Chart**

- A Bar Chart is used to compare values between different categories in a clear and simple way.

➢ **HOW TO CREATE A BAR CHART IN TABLEAU**

- Open Tableau and connect to your dataset.
- After the data is loaded, open a new worksheet.
- Now select a category field such as Region or Product and drag it to the Rows shelf.
- Next, select a numerical field such as Sales or Profit and drag it to the Columns shelf.
- If the chart does not appear as bars, go to the Marks card and choose “Bar” from the list.
- You will now see a clear bar chart comparing all categories.
- You can improve the chart by showing labels so the exact values appear on each bar.
- Finally, give a proper name to your sheet, such as “Sales by Region – Bar Chart.”



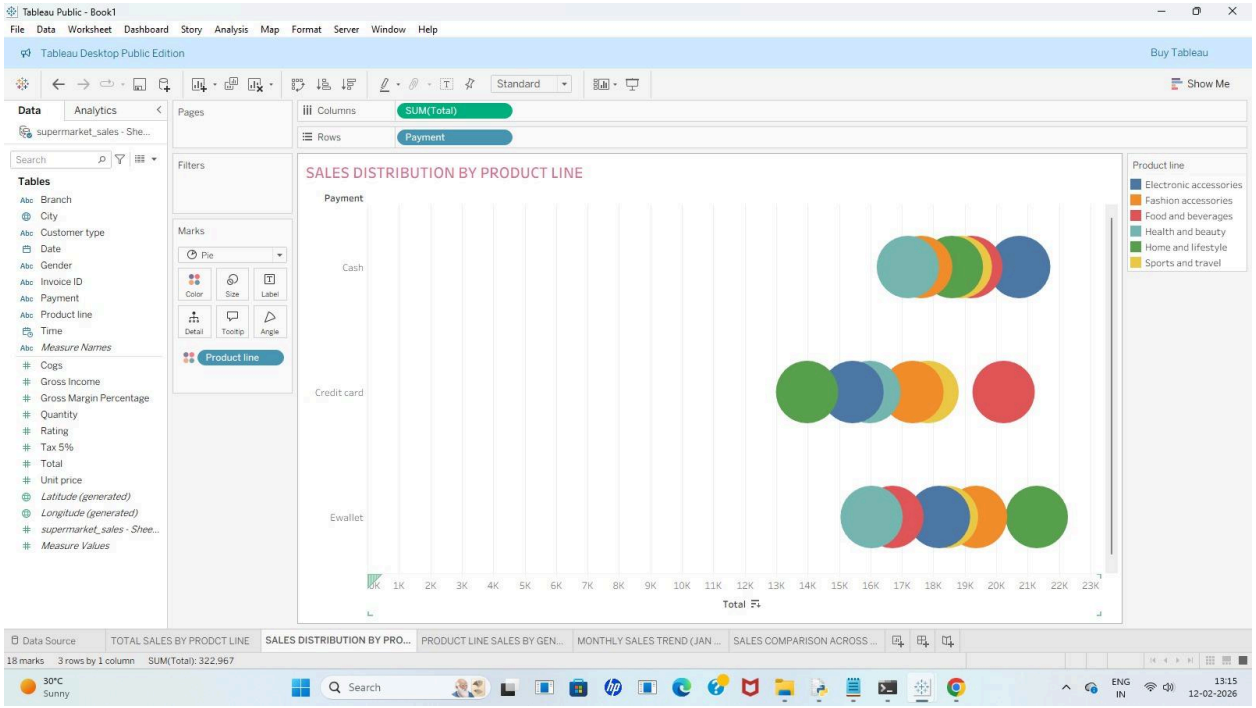
➔ **Create pie Chart**

❖ **Pie Chart - Purpose**

- A pie chart is used to show how a whole is divided into different parts.

➢ **PIE CHART - STEP BY STEP IN TABLEAU**

- Open Tableau and connect to your dataset. Go to a new worksheet.
- From the Data pane on the left side, choose the category field you want to divide your data by, such as Product Line or Payment, and drag it into the view area.
- Next, choose the numeric field (measure) you want to analyze, such as Total Sales, and drag it into the view.
- Go to the Marks card and click the dropdown menu. Change the chart type to Pie.
- Now drag the numeric measure (for example, SUM of Sales) to the Angle option in the Marks card.
- Drag the category field to Color so that each slice appears in a different color.
- If you want to show values or percentages on the slices, drag the measure to Label.
- Adjust the Size slider on the Marks card to make the pie chart larger or smaller.



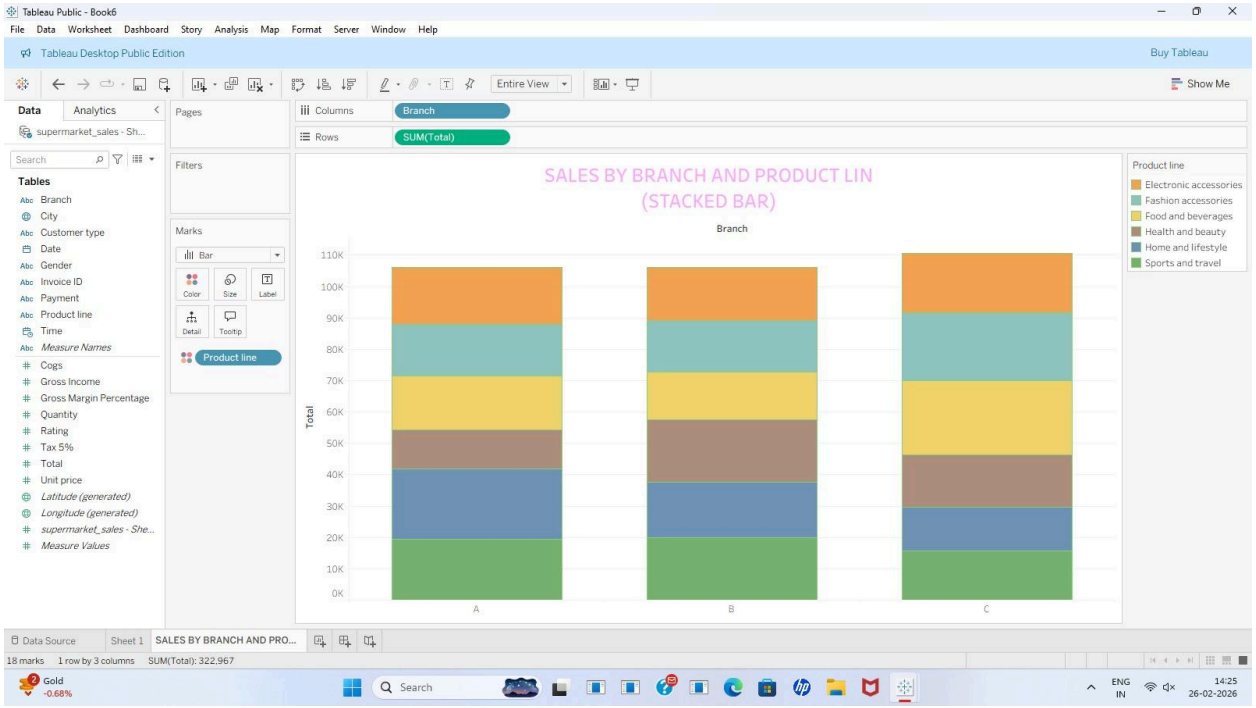
➔ **Create Stacked Bar Chart**

❖ **Stacked Bar Chart - Purpose**

- A stacked bar chart is used to compare totals across different categories while also showing how each total is divided into parts.

➢ **STACKED BAR CHART-STEP BY STEP IN TABLEAU**

- Open Tableau and connect to your dataset. Go to a new worksheet.
- Drag the main category field, such as Product Line, into the Rows.
- Drag the measure you want to analyze, such as Total Sales, into the Columns shelf.
- Make sure the Marks type is set to Bar.
- Now drag the sub-category field, such as Customer Type or Gender, to the Color option in the Marks card.
- Check that stacking is enabled. Go to the top menu, click Analysis, and make sure “Stack Marks” is selected.
- If you want to show values on the bars, drag the measure to the Label option in the Marks card.
- You can adjust colors, titles, and formatting to improve presentation.



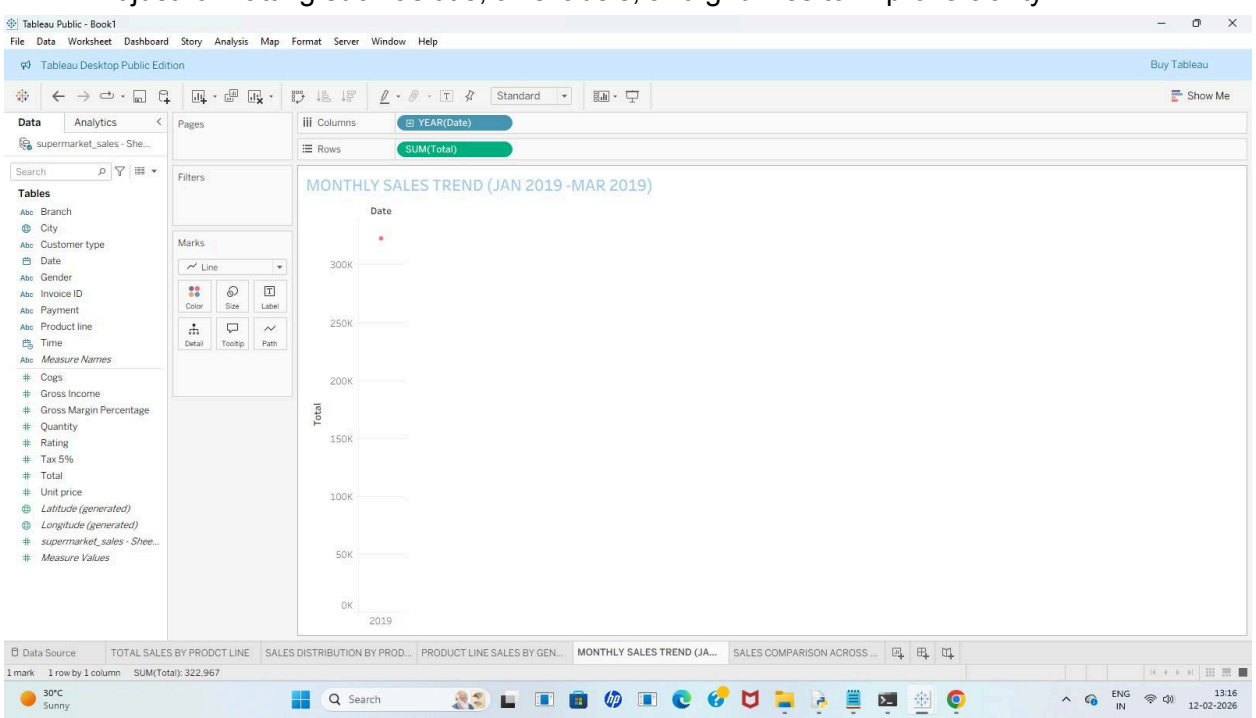
➔ **Create Line Chart**

❖ **Line Chart- Purpose**

- A line chart is used to display trends over a period of time.

➢ **LINE CHART-STEP Y STEP IN TABLEAU**

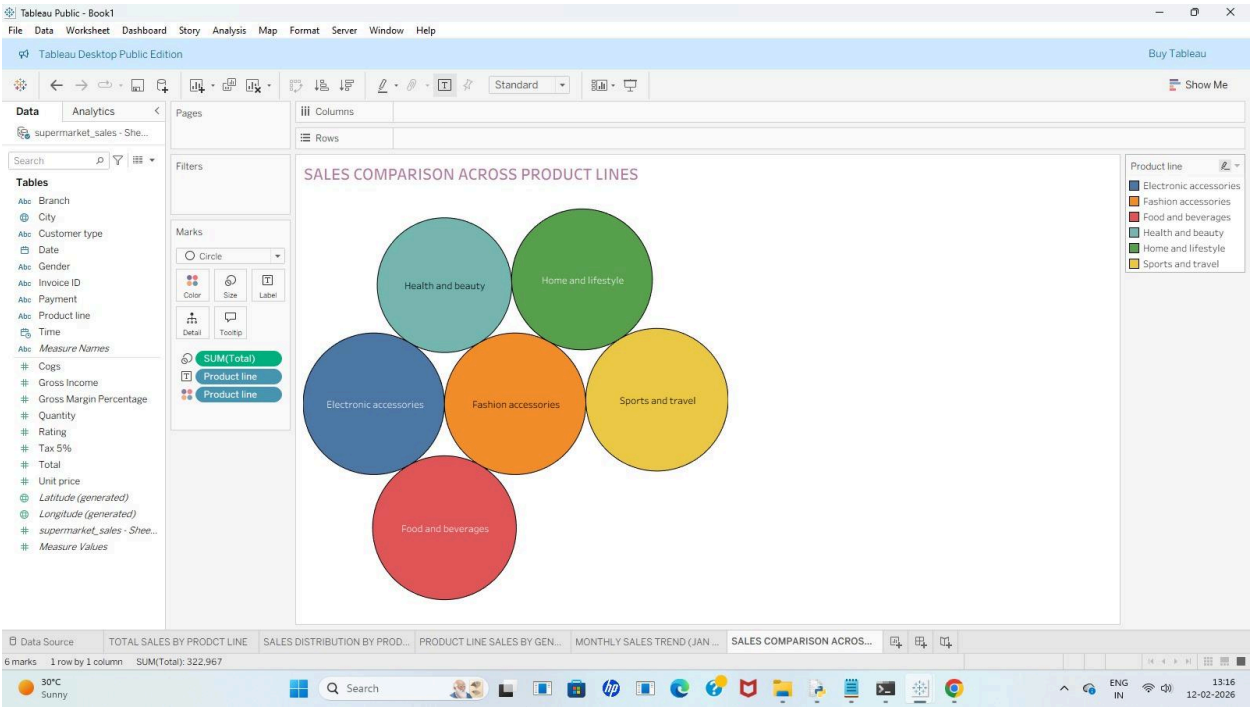
- Open Tableau and connect to your dataset. Go to a new worksheet.
- From the Data pane, drag the Date field to the Columns shelf. Tableau will automatically group it by Year.
- Next, drag the measure you want to analyze, such as Total Sales, to the Rows shelf.
- Go to the Marks card and check the chart type.
- If the line does not appear continuous, click the Date field in the Columns shelf and make sure it is set to Continuous (green color).
- If you want to compare multiple categories, such as sales by product line or gender, drag that category field
- To display values on each point, drag the measure to the Label option in the Marks card.
- Adjust formatting such as title, axis labels, and gridlines to improve clarity.



➔ **Create Bubble Chart**

❖ **Bubble Chart - Purpose**

- A bubble chart is used to visually compare values across different categories using circles.

➢ **BUBBLE CHART-STEP BY STEP IN TABLEAU**


- Open Tableau and connect to your dataset. Create a new worksheet.
- From the Data pane, drag the dimension you want to analyze, such as Product Line, into the view area.
- Now drag the measure you want to analyze, such as Total Sales, into the view.
- Go to the Marks card and change the chart type from Automatic to Circle.
- Drag the measure (SUM of Total Sales) to the Size option in the Marks card.
- Drag the same dimension (Product Line) to the Label option so the name appears inside each bubble.
- If you want different colors for each category, drag Product Line to the Color option.
- To arrange the bubbles neatly like in your screenshot, click on Show Me in the top right corner and select Packed Bubbles.
- Use the Size slider in the Marks card to adjust bubble size for better visibility.
