ASSIGNMENT - 1

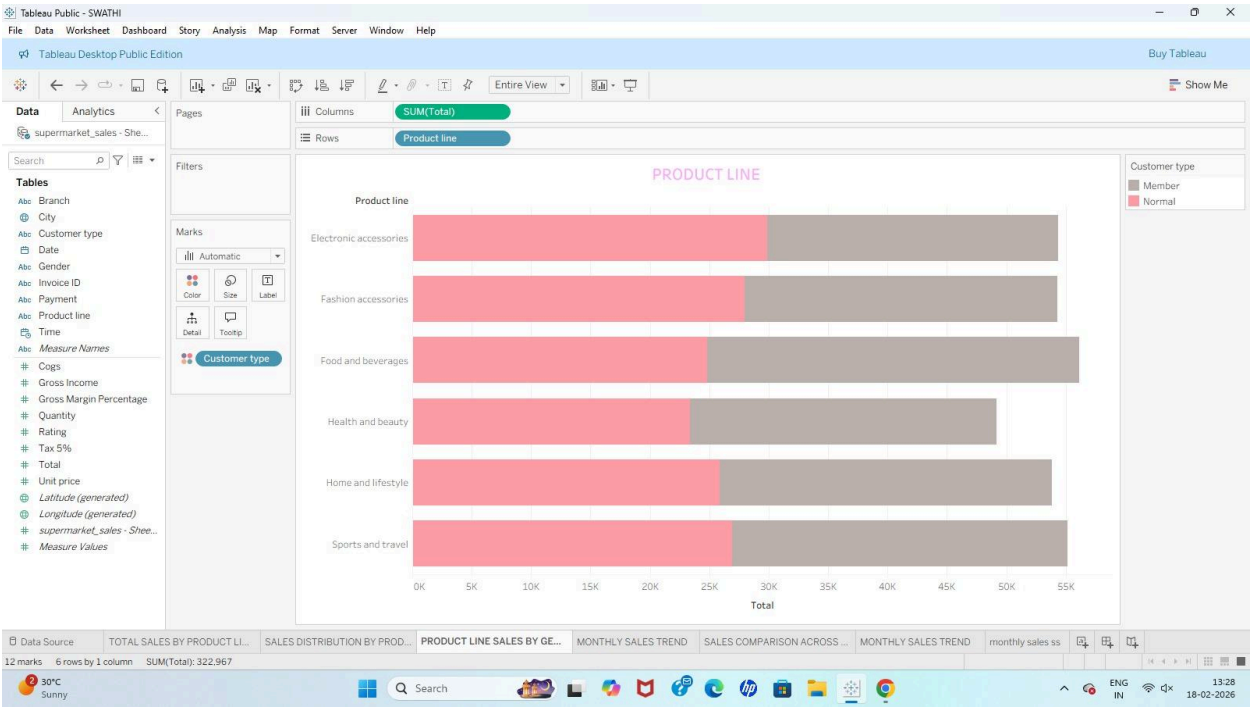
❖ Create Bar Chart

❖ Purpose

- This chart explains who buys each product line.

❖ Step-by-step process

- Open a new worksheet and rename it Product Line Sales by Customer Type.
- Drag Product line to the Rows shelf.
- Drag Total (Sales) to the Columns shelf.
- In the Marks card, set the mark type to Bar.
- Drag Customer type to Color on the Marks card.
- This splits each bar into Member and Normal segments (stacked).
- If bars appear vertical and you want horizontal, use Swap Rows and Columns.
- Drag Total to Label to display values on each segment (optional).
- Sort Product line by SUM(Total) (descending) to make comparison easier.
- Edit the title to Product Line Sales by Customer Type.
- Clean the formatting (consistent colors with your other sheets, lighter grid lines) before adding it to the dashboard.



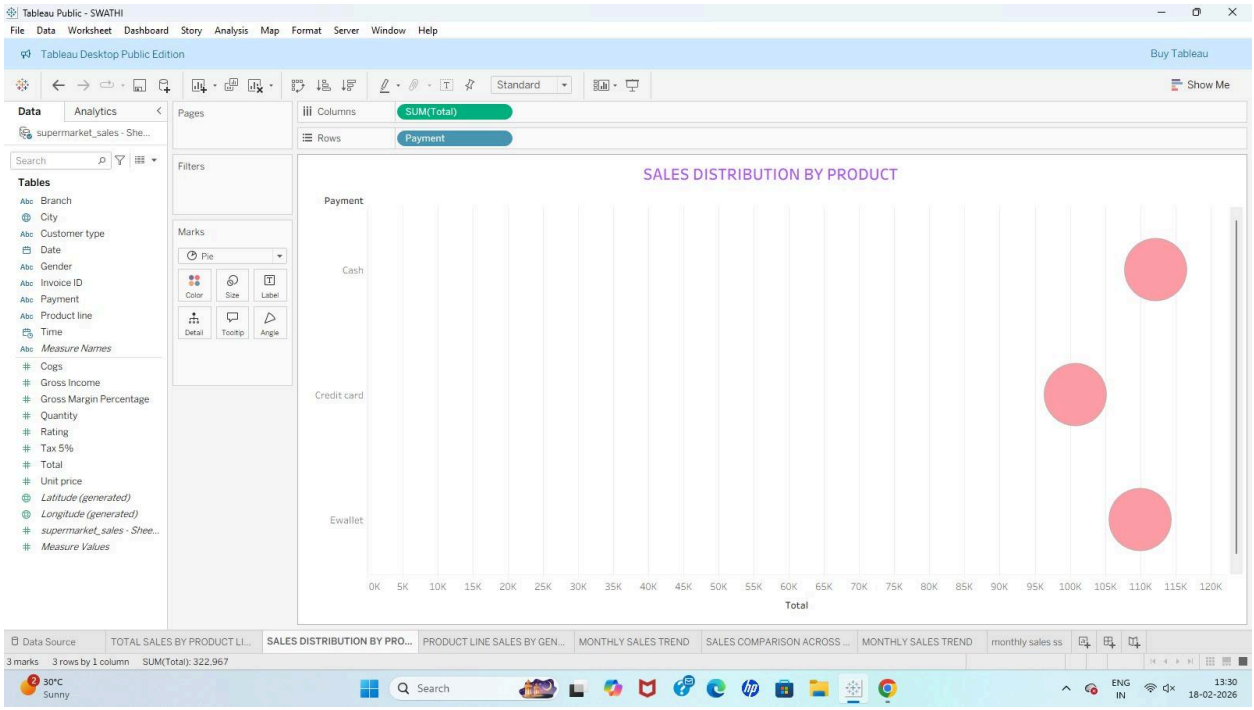
☐ Create Pie Chart

☐ Purpose

- This chart helps you: • compare total sales by payment method

☐ Step-by-step process

- Open a new worksheet and rename it Sales Distribution by Payment.
- Drag Payment to the Rows shelf.
- Drag Total (Sales) to the Columns shelf.
- In the Marks card, change the mark type to Circle (or Pie if you want percentage slices).
- Drag Total to Size to make circles proportional to sales.
- Drag Payment to Color so each method has a different color.
- Drag Total to Label to display values on the chart.
- Sort Payment by SUM(Total) (descending) to show highest first.
- Edit the title to Sales Distribution by Payment Method.
- Clean formatting so it matches your other sheets before placing it on the dashboard.



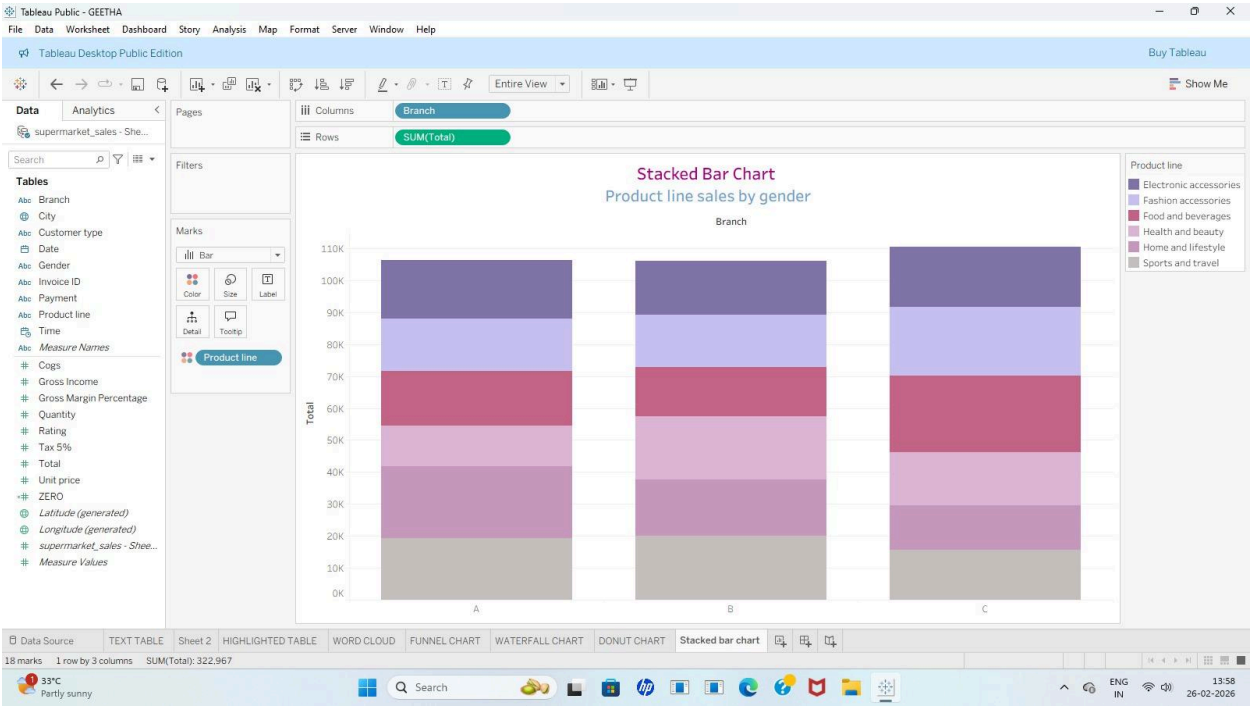
➔ Create Stacked Bar Chart

➔ Purpose

- A stacked bar chart shows total sales per Branch and how that total is divided by Product Line.

➔ Step-by-step process

- Open a new worksheet and rename it Stacked Bar Chart.
- From the Data pane, drag Branch to the Columns shelf.
- Drag Total (Sales) to the Rows shelf.
- In the Marks card, make sure the mark type is Bar.
- Drag Product line to Color on the Marks card.
- This stacks each bar by product line segments.
- If bars are horizontal and you prefer vertical, click Swap Rows and Columns.
- Drag Total to Label to display values on the bars (optional but helpful for your report).
- Edit the title to Product Line Sales by Branch.
- Tidy the formatting so it matches your other sheets (consistent colors, lighter grid lines, readable fonts) before placing it on the dashboard.



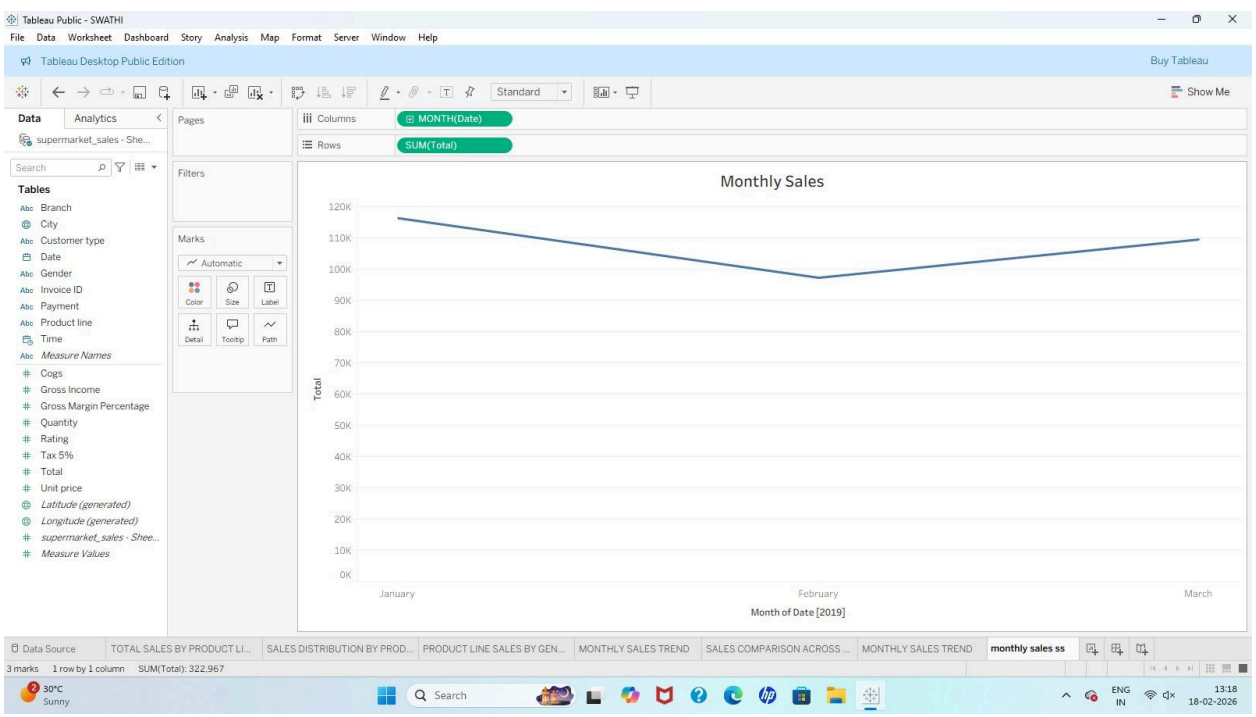
★ Create Line Chart

★ Purpose

- This chart helps you: • track sales trend over time

★ Step-by-step process

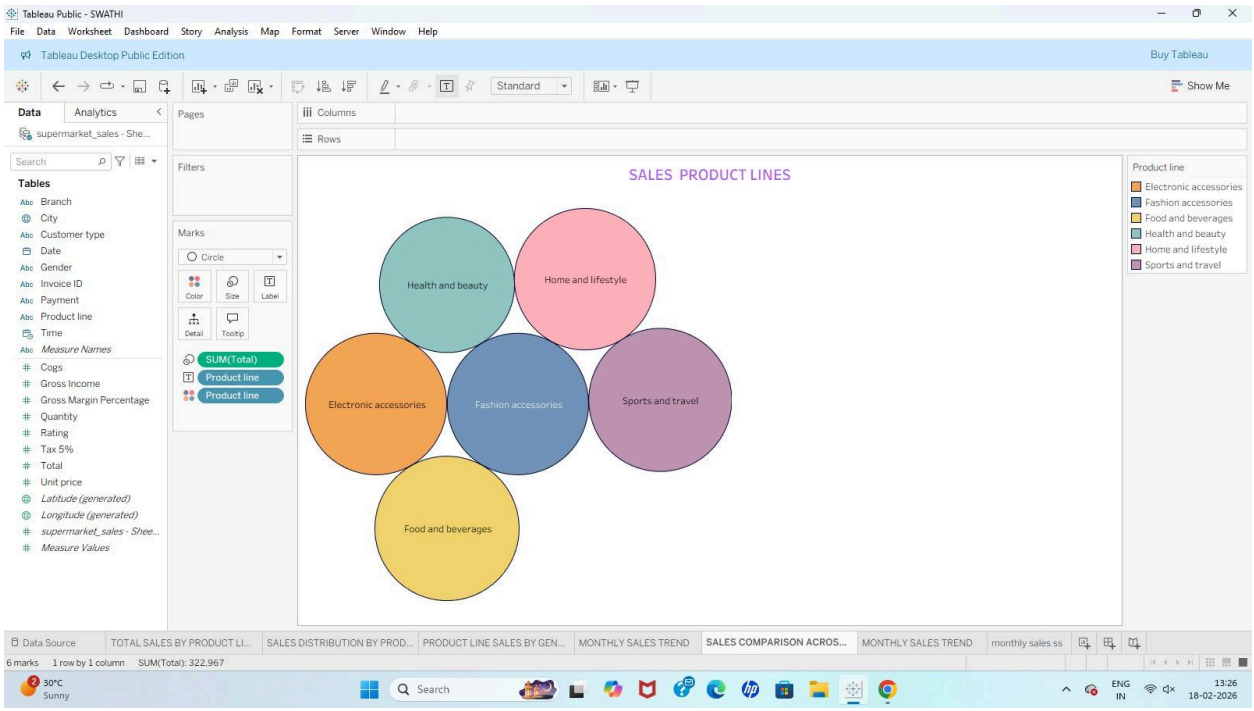
- Open a new worksheet and rename it Monthly Sales.
- Drag Date to the Columns shelf.
- Click the Date pill → change it to MONTH (continuous green pill like in your screen).
- Drag Total (Sales) to the Rows shelf.
- Tableau will automatically create a line chart.
- If not, change Marks type → Line.
- Drag Total to Label if you want to display monthly values.
- Click Color and choose a soft color to match your other charts (you used light tones already — nice consistency).
- Edit the chart title to Monthly Sales Trend.
- Ensure the axis shows months in order (Jan → Feb → Mar).



➢ Create Bubble Chart

➢ Purpose

- This chart helps you: • compare total sales across product lines at a glance

➢ Step-by-step process


- Open a new worksheet and rename it Sales Product Lines.
- Drag Product line into the view (you can drop it on the empty canvas).
- Change the Marks type to Circle.
- Drag Total (Sales) to Size so bubble size represents sales amount.
- Drag Product line to Color to differentiate categories.
- Drag Product line to Label so each bubble shows its name.
- Click Show Me and choose Packed Bubbles if the circles are not grouped automatically.
- Increase Size slider so bubbles are clearly visible.
- Edit the title to Sales Product Lines.
- Keep formatting consistent with your other sheets (same font style and soft colors like your Funnel and Waterfall charts).
- Now this sheet works as a visual summary panel when you place it on the dashboard with your Branch stacked chart and Payment distribution
